To help with the understanding of products we offer, the following is a brief description of their purpose:

Beneficial Bacteria: Dry or Liquid : Provides clean, clear and healthy water conditions. Helps reduce pond maintenance. Contains 8 pure strains of concentrated beneficial bacteria including Photo Synthetic. It is effective at reducing sludge, uneaten fish food and waste as well as decaying plant material and excess nutrients. Safe for all wildlife. One pump of liquid treats 100 gallons. 1 scoop of dry treats 1,300 gallons of water. Water temps need to be above 55°.

Cold Water Bacteria: Reduces ammonia, nitrite and organic debris. Works in water as cold as 35°.

Sludge & Fliter Cleaner: Contains 5 strains of heterotrophic bacteria and is used along with beneficial bacteria. It focuses on the break down of sludge like matter that forms in your filters and the bottom of the pond.

Eco Blast: Eliminates algae on waterfalls, streams and fountains. It works on contact. Turn off waterfall to apply. Can be used at any temperature. If using in pond keep waterfall on and have proper aeration. This is a topical algaecide.

Algaecide: Controls string algae and clears green water. Can be use on ponds with fish and plants but DO NOT overdose. Be sure to have adequate aeration when using. It is best to use algaecides in early morning as they remove oxygen from water.

Pond Detoxifier: Makes tap water safe for fish by removing and detoxifying chlorine. Neutralizes ammonia. Add when topping pond off with city water. (1) 16 oz bottle treats 10,000 gallons.

Rapid Clear: Quickly clears cloudy pond water by clumping suspended particles. Works within 24hrs. For best result use with Rapid Clear filter pad in skimmer.

Fish Food: Cold Water food can be fed in spring and fall once water temps reach 55°. It is important to slowly begin feeding your fish every few days then slowly increase the feedings. By Memorial Day you can switch to Premium everyday food. Be sure to order the right size pellets based on your fish size.

Bioballs: Unlike lava rock, these do not need to be replaced. Wash every year. They go in your biofall and give surface area for colonies of bacteria to grow.

Give your water feature a makeover, consider a 2022 feature renovation!

Have your fish out grown their home, would you like a new look. Give us a call and we'd love to discuss some options. Ask about our new financing program.

Referrals are our greatest compliment! As a thank you we'd like to give you a \$100 gift towards your next service or product with a referred installation or makeover.
